

LETTUCE MULTILEAF CULLEN

CULLEN is a mid-green multileaf lettuce that can be harvested for both whole head production (sleeving) and for cut leaf to include in salad mixes. **CULLEN** has a very high leaf count that creates bulk and good recovery of processed leaves. **CULLEN** produces an even head with uniform leaves distributed throughout resulting in less wastage of large, outer leaves. Due to its versatility, **CULLEN** can be grown year round in a range of growing conditions, showing good tolerance to bolting and tipburn during periods of heat. The architecture of the leaves is beneficial for processing with a narrow stem attachment, broader leaf tip and three dimensional structure which seems to handle processing better and fills out salad bags. Under field production **CULLEN** will produce a more compact head size.

The information provided here is based on an average of data and observations collected from our trials. Significant variations may occur in the performance due to a range of conditions, including cultural/management practices, climate, soil type and geographic location. As a consequence South Pacific Seeds (NZ) Ltd cannot accept liability as to accuracy of this information.

VARIETY FEATURES

- Mid-green colour
- Medium head size
- High vigour

AGRONOMIC CONSIDERATIONS

- Suitable for field production and hydroponic systems
- Strong tolerance to tipburn
- Strong tolerance to bolting

PACK SIZES

1M, 5M, 25M

DISEASE RESISTANCES

High Resistance: Bl:1-30
