

SPINACH MORPHEUS

MORPHEUS is a dark green, mid-vigour spinach suitable for babyleaf production from late Spring through Summer and on until late Autumn. **MORPHEUS** is extremely high yielding and produces high numbers of thick, savoyed leaves which process well making it an ideal variety for producers of salad packs. Leaves are oval in shape with a very slight point resulting in a tolerance to tip-splitting in windy conditions. **MORPHEUS** has a very wide window and, in more northern regions, may even be suitable for early Winter harvest. As with many savoyed types, **MORPHEUS** will become even more curled as the conditions cool, thus increasing the yield. **MORPHEUS** has a strong disease package and shows good field tolerance to *Colletotrichum* in Autumn.

VARIETY FEATURES

- Dark green leaf
- Oval leaf shape
- True mid-savoy

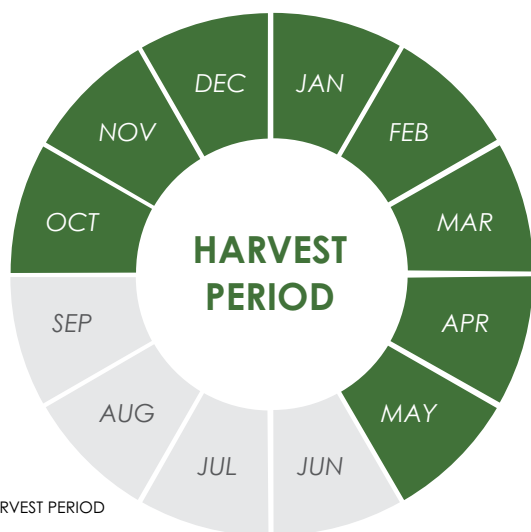

AGRONOMIC CONSIDERATIONS

- Strong tolerance to bolting

PACK SIZES

100M, 500M, 1MM

HARVEST PERIOD

DISEASE RESISTANCES

High Resistance: Pfs:1-16

The information provided here is based on an average of data and observations collected from our trials. Significant variations may occur in the performance due to a range of conditions, including cultural/management practices, climate, soil type and geographic location.
