

BABYLEAF MUSTARD

INCA

INCA is red elk type for baby leaf salad production. **INCA** differs from Red Antler in that it is coloured on both sides of the leaf and has a thicker leaf due to slightly slower growth making it an ideal warm season variety.

Although particularly suited to warm season, **INCA** can be grown year round and provides better shelf life than many standard mustard products.

INCA provides colour and texture to salad mixes and the leaf shape gives good bulk to pillow packs. **INCA** has a mild brassica flavour and is not over powering.

VARIETY FEATURES

- Dark red colour
- Dark red stem colour
- Lobed leaf shape
- Serrated leaf margins
- Erect growth habit

AGRONOMIC CONSIDERATIONS

- Best results obtained from high population sowings particularly for machine harvested crops
- Best results obtained when grown in warmer conditions
- Strong tolerance to bolting

PACK SIZES

1kg, 5kg, 10kg

Untreated seed

All our microgreen seeds are untreated.

The information provided here is based on an average of data and observations collected from our trials. Significant variations may occur in the performance due to a range of conditions, including cultural/management practices, climate, soil type and geographic location.
