

LETTUCE ICEBERG SABANA

SABANA is a true summer-harvest iceberg with a wide window which, depending on the area, may stretch from late spring harvest until mid-autumn harvest.

SABANA has a level of vigour suited to variable conditions – enough to keep going in early season cool periods and mild enough to resist bolting in extremely warm, dry heat.

SABANA produces a medium sized frame and a balanced, medium sized head with an even fill and very good uniformity. The frame has a high leaf count for a summer style lettuce and the true Salinas style nature of the wrap makes for an attractive presentation.

SABANA has shown a strong tolerance to sclerotinia pressure and, of particular significance, it has fusarium resistance Fol. (1), a huge advantage in humid areas and on heavy soils.

VARIETY FEATURES

- Mid-green head colour
- Medium-large head size
- Medium vigour and medium frame.

AGRONOMIC CONSIDERATIONS

- Fusarium resistance Fol.(1)
- Strong tolerance to bolting.

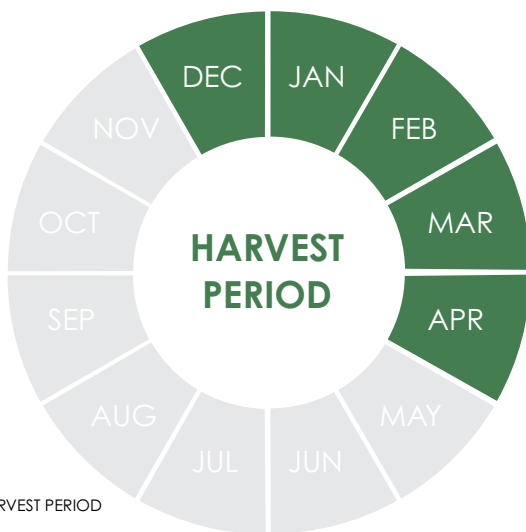

PACK SIZES

10M, 25M, 100M

DISEASE RESISTANCES

Intermediate Resistance:
Bl.1-26, 28, 32, Fol.(1)

HARVEST PERIOD

The information provided here is based on an average of data and observations collected from our trials. Significant variations may occur in the performance due to a range of conditions, including cultural/management practices, climate, soil type and geographic location. As a consequence South Pacific Seeds (NZ) Ltd cannot accept liability as to accuracy of this information.

UNTREATED SEED

Available as untreated seed.
