

CAULIFLOWER FALKIS

Producing a very upright frame **FALKIS** is easy to harvest with consistent wrapper leaves providing essential curd cover. A key feature of **FALKIS** is the vibrant white head colour, giving excellent presentation for fresh market.

With good heat tolerance as well as adaptability to perform well into the autumn period, **FALKIS** complements our existing warm season standard Boris, with a much wider harvest window.

Providing a uniform cut-out at maturity, **FALKIS** matures in approximately 12 to 14 weeks from transplant depending on harvest slot.

 HARVEST PERIOD

The information provided here is based on an average of data and observations collected from our trials. Significant variations may occur in the performance due to a range of conditions, including cultural/management practices, climate, soil type and geographic location. As a consequence South Pacific Seeds (NZ) Ltd cannot accept liability as to accuracy of this information.

VARIETY FEATURES
