

CAULIFLOWER PAROTIS

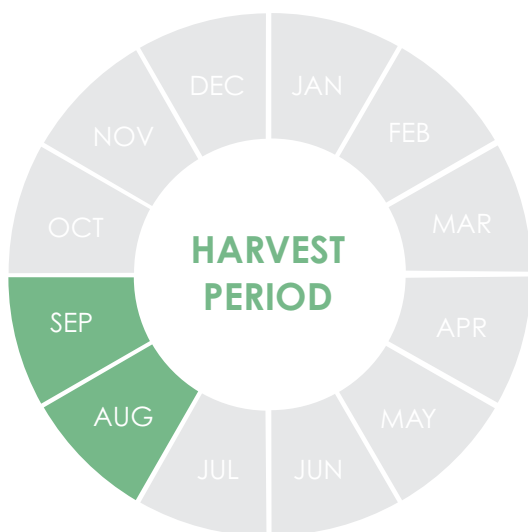

PAROTIS is a new long-cycle variety with a very strong frame, suitable for the late winter harvest period in the South Island.

Displaying high vigour with a tall plant and high leaf count, **PAROTIS** has the required frost tolerance to ensure a successful crop in cold climates.

PAROTIS matures in approximately 30-32 weeks from transplant.

Indent only, 6-8 weeks.

HARVEST PERIOD

The information provided here is based on an average of data and observations collected from our trials. Significant variations may occur in the performance due to a range of conditions, including cultural/management practices, climate, soil type and geographic location. As a consequence South Pacific Seeds (NZ) Ltd cannot accept liability as to accuracy of this information.
